

McKeever Dermatology Clinics, Inc.

ALLERGY, EAR AND SKIN SPECIALIST

Instructions for Continuing Hyposensitization

Please continue giving 1cc of the allergy serum every 20 or 21 days. Finish what is left in the old vial before moving on to a new vial. If you have a partial dose left in the old vial you may draw it into the syringe and then go to the new vial and draw from it until you have the full one cc dose.

Please call at least one week before your new vial is needed. Vials can be shipped out for an additional \$25 charge. This charge includes packaging, handling and shipping fees. Because the serum may lose its potency if left out of the refrigerator for long periods of time it is shipped Express Mail 1-2 day delivery. As the allergy serum is custom made for your animal you will be asked for a Visa or Mastercard number when ordering the vial.

Your pet may experience occasional flare-ups of the allergies while on the allergy injection treatment, especially during hot humid summer months, or the fall pollen season. Topical medications, steroids, antihistamines, or shampoos may be needed to help control your pet's allergies during these times.

If you have any questions about your pet's allergies, please call Dr. McKeever at (952) 946-0035.
